

# ARTIFEX

Elastisches Schleifen und Polieren  
Elastic bonded Abrasives

**ELASTIC - FLEXIBLE - POWERFUL**

**We offer solutions  
to today's challenges  
for tomorrow's  
production**

## YOUR PARTNER IN PRECISION

**ARTIFEX** is a family owned company which has been involved in surface finishing for over 85 years.

Based on the most up-to-date quality standards, we design and manufacture elastic-bonded abrasives for nearly all metal grinding and finishing processes.

Our aim is to find the best solutions to finishing problems by close customer contact and service, thereby maintaining our clients and our own leading position in industrial markets.

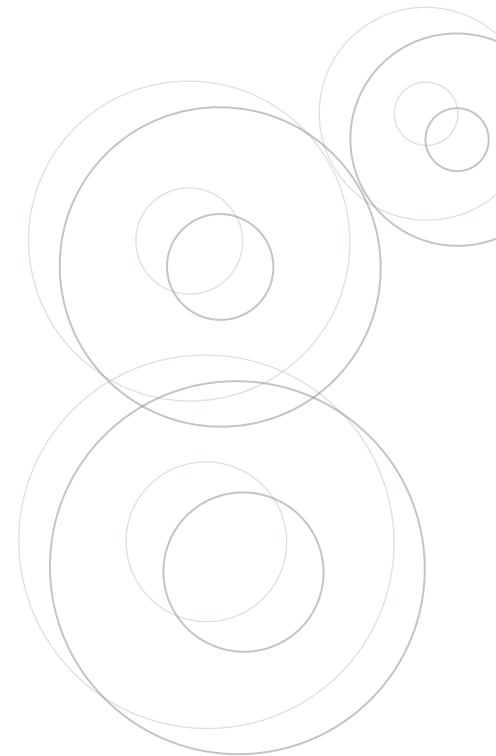

**WE RESPOND TO YOUR NEEDS!**

### YOUR REQUIREMENTS:

- Special grinding and polishing demands
- Process and workpiece stability
- Reduction of cycle times
- Cost reductions through increased productivity

### WE OFFER YOU:

- Customized solutions
- Precision engineered products made in Germany
- Above average service life
- Surface finish is improved with minimal material removal

## ELASTIC BONDED ABRASIVES

**ARTIFEX** abrasives comprise either silicon carbide or aluminous oxide abrasive grain, supported in a foamed polyurethane or rubber flexible matrix.

The bespoke combination of bonding and abrasive facilitate the desired surface finish.

For any particular requirement these elastic-bonded tools are available in soft, medium and hard densities, but always in a flexible bonding.

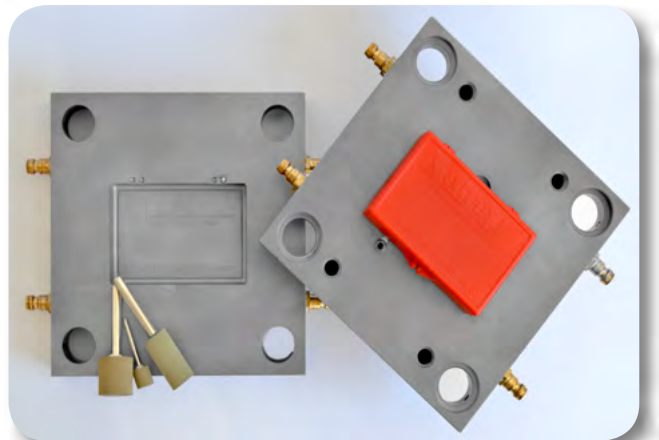

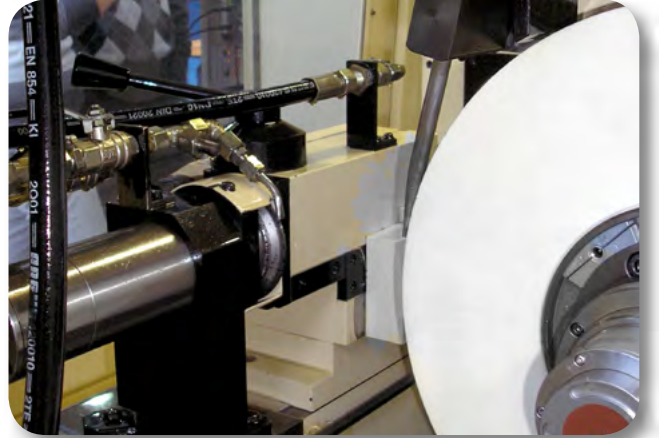

### ADVANTAGES OF ELASTIC-BONDED GRINDING AND POLISHING TOOLS:

- Conform perfectly to the workpiece profile
- Surface blending only
- Non-clogging and free cutting
- Cool grinding in operation due to the open structure
- Flexible grinding effect helps to minimise any operator error
- Easily profiled with conventional tools
- **ARTIFEX** abrasives give constant surface finishes
- Roughness is reduced, material contact area is enlarged
- Surface finishes of well below 1  $\mu\text{m}$  (micron) achievable

## YOUR APPLICATION

**ARTIFEX** abrasive products can found in virtually all areas of metal working production, whether manual or mechanical and whether wet or dry operation.

- Cylindrical grinding
- Internal cylindrical grinding
- Surface grinding
- Flat grinding
- Fine finishing
- Deburring and dressing
- Cleaning and satin-finishing
- Mottling and matt-finishing
- Polishing and high-gloss finishing

### APPLICATION EXAMPLES :

- Cleaning and polishing of castings
- Deburring and polishing of surgical instruments
- Polishing and satin-finishing of jewellery, watches and watch straps
- Descaling and polishing of forged machinery parts
- Polishing of drill and cutting tool flutes
- Descaling and polishing of sheet steel
- Superfinishing of engine components

## YOUR SURFACE FINISH

**ARTIFEX** products are used worldwide for many different applications in a wide range of industries, including medical and dental industries, watch, jewellery, machinery and mould manufacture. Furthermore we produce abrasive tools for the electronic and precision engineering sectors and many other industrial markets.

Among other things, the following surfaces can be improved:

- Steel, heat-treated steel, carbon steel
- Hardened steel, carbides
- Aluminium, non-ferrous and precious metals
- Sintered metals and cast iron
- Plastic, wood

**Profit from our Know-how**

**We customize our approach to match your requirements!**

Elastic-bonded abrasives are particularly suited for applications where conventional vitrified and resin-bonded grinding wheels offer no improvement in surface finish.

With **ARTIFEX** abrasives you can achieve surface finishes of 1  $\mu\text{m}$  (micron).

Fulfilling your need is our goal.  
We try to meet every customer's requirements.

With great focus, we develop and produce today products for the technology of tomorrow.
